MISS HEATHER.

The New York prices quoted in this book correspond exactly 99% of the time with the lowest figure of the spread quoted in the "Times". The 1% of discrepancies seem to be very small discrepancies.

I think therefore the Professor can safely use the book, although any actual quotations will have to be checked to the "Times" and in particular it will not ~~fully~~ show the highest points reached, because <sup>it</sup> gives ~~only~~ each day's lowest figure.
